Simin Shoeibi

Full-Stack Web Developer & AI Systems Engineer

simin.shoaibi@proton.me | Barcelona, Spain | +34691083652
https://www.linkedin.com/in/simin-shoaibi/ | https://github.com/SuisSanem000

Based in Barcelona, Spain, with full EU work authorization, open to full-time or part-time roles across on-site, hybrid, or remote setups.

Summary

Full-stack web developer with 9+ years of experience across startups and diverse projects. I've scaled real-time platforms for 60K+ concurrent users. I've built and shipped high-traffic PERN and MERN stack systems. I created a top-10 VS Code extension (630K+ installs). I drove 540% organic growth via SEO, blogging, and 12 technical articles I wrote, reaching 120K+ readers. Recently, I owned the full stack for an AI legal automation platform at QueryLaw (Australia), integrating Claude Opus/Sonnet for 95%+ accuracy through prompt engineering, dynamic context, structured outputs, validation pipelines, and manual tests. At Parsaiane (2019-2025), I worked with the CTO on large-scale data processing and tool development; designed, implemented, and optimized backend workflows and APIs; embedded LLMs into news feeds for 60K+ DAU; set up CI/CD pipelines; and mentored junior engineers. Earlier (2016-2019), I designed and optimized database systems using MySQL, PostgreSQL, SQLite, SQL Server, and MongoDB. I developed desktop apps in Delphi/Free Pascal, using DevExpress, including a JSON Viewer for 60K+ users and custom rendering engines. I have expertise in AI decisions, dev tools, analytics, high-load backends, databases, and more.

Key Achievements

- Contributed to a high-performance JSON Viewer desktop application adopted by 60K+ users worldwide
- Architected a full-stack legal-tech platform (TreeScribe/QueryLaw), transforming complex European statutes into machine-readable, automated decision systems.
- Engineered a reliable AI integration layer that achieved 95%+ reasoning accuracy using advanced prompt engineering and multi-layer JSON Schema (AJV) validation.
- Created a top-10 VS Code extension(630K+ installs) to contribute to the open-source community and have an impact.
- Authored 12 technical articles read by 120K+ developers, increasing user growth by up to 540%.
- Developed a 2D rendering engine for graphic tools.
- Engineered financial systems with automated reporting/transaction processing.
- Designed databases/backends for mobile apps like Hijri calendar and health platforms.

Professional Experience

Full-Stack Web Developer & AI Systems Engineer

TreeScribe / QueryLaw — AI legal-tech platform for European jurisdictions Remote, Australia | Jan Feb 2025 – June 2026

A next-generation AI-powered legal-tech platform transforming complex European laws into automated, machine-readable decision systems. (https://querylaw.com)

- Architected an antifragile AI decision system with failure feedback, guardrails, and stress-informed learning for reliable legal reasoning under edge cases.
- Designed next-generation Legal AI interfaces (UI/UX) using React/TypeScript, praised for clarity and usability in expert-AI interactions.
- Modeled complex statutes and case law into machine-readable decision graphs with provenance, explainability, and audit trails.
- Built backend telemetry for large-scale AI validation, including real-time monitoring and feedback to detect brittle logic.
- Led human-centered AI tooling for traceable reviews, side-by-side comparisons, and failure reproduction. ● Collaborated with legal and AI specialists to ensure interpretable outputs and reviewer workflows across jurisdictions.

Full-stack Web Developer

Parsaiane Remote, Netherlands Jan 2019 – Dec 2024

Advanced data analytics and data science tooling (dadroit.com)

- Led full-stack architecture for PERN-based platforms serving 60K+ concurrent users with real-time React/TypeScript/Socket.IO dashboards.
- Implemented and optimized high-load RESTful/GraphQL APIs using Node.js, Express.js, NestJS, Fastify, achieving 35-40% latency reduction and 99.9% uptime.
- Developed a semantic news feed platform integrating OpenAI LLM for content scoring, summarization, personalization, and automation for 60K+ DAU.
- Created top-10 VS Code extension (480K+ installs) and boosted JSON Viewer visibility via SEO and blogging, driving 540% organic growth.

- Established scalable CI/CD pipelines with Docker, Kubernetes, GitHub Actions, and GitLab CI, reducing bugs by 40%.
- Implemented and optimized relational (PostgreSQL) and NoSQL (Redis, MongoDB) databases for high scalability and efficiency.
- Mentored 4+ junior engineers, promoting best practices and collaborative culture.

Desktop Developer and Database Engineer

Parsaiane — Tehran, Iran | Jan 2017 – Dec 2018

Software company specializing in desktop & enterprise automation solutions.

- Built cross-platform desktop apps (Windows, macOS, Linux) using Delphi, Free Pascal, and DevExpress for medical, financial, and fleet management.
- Developed high-performance JSON Viewer for multi-GB datasets with syntax highlighting, tree views, and search; adopted by 60K+ users worldwide.
- Engineered custom 2D vector/typography rendering engine using Skia/Free Pascal for internal design tools.
- Delivered automation systems including real-time vehicle tracking with GPS/SQLServer, finance suites with transaction processing/reconciliation, and medical management with offline databases.
- Applied OOP, SOLID principles, and performance profiling for responsive UIs in constrained environments.

Technical Skills

Core Languages: TypeScript, JavaScript (ES6+), SQL, Delphi/Free Pascal
Frontend: React.js, Next.js 14 (App Router, Server Components, SSR/SSG), Redux/Zustand, tRPC, Tailwind CSS, MUI, SASS, PWA, HTML5/CSS3
Backend: Node.js, NestJS, Fastify, Express, Microservices, REST APIs, GraphQL, tRPC, WebSockets, Socket.IO, WebRTC, gRPC, High-load system design, Real-time applications
AI & LLM Engineering: Claude Opus/Sonnet, OpenAI GPT-4/GPT-4o, Grok, DeepSeek, Vertex AI; Prompt engineering, Dynamic context windows, Structured outputs, Token optimization, Hallucination mitigation (<3%), Antifragile AI design, Automated validation/testing, Explainable AI (XAI), Knowledge graphs/decision modeling
Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, Prisma, TypeORM, Sequelize, Mongoose; Performance tuning, Indexing, Schema design for high concurrency
DevOps & Cloud: Docker, Kubernetes, GitHub Actions, GitLab CI/CD, Jenkins, Vercel, AWS, GCP; Container orchestration, Automated pipelines, Infrastructure as Code
Messaging & Streaming: RabbitMQ, Kafka
Testing & Quality: Jest, Supertest, React Testing Library, Mocha/Chai, TDD, Automated validation, ELK Stack monitoring
Security & Tools: JWT, OAuth, Auth0, Passport.js, Bcrypt, Swagger/OpenAPI, Postman, Insomnia.
Methodologies: Agile, DevOps, SOLID, OOP, Domain-Driven Design, Performance optimization for 60K+ users

Domain Expertise

AI-Powered Legal Automation: Expertise in modeling complex European statutes and case law into machine-readable decision graphs, achieving high accuracy with provenance, audit trails, and collaboration with legal specialists to ensure interpretable outputs across jurisdictions.
Technical Content Marketing & SEO: Boosted developer tool visibility through blogging, technical writing, and SEO strategies, driving 540% organic growth for VS Code extensions and JSON Viewer.
Data Analytics & Semantic Platforms: Integrated LLMs for content scoring, summarization, and personalization in news feeds serving 60K+ daily active users.
Financial Systems Automation: Engineered transaction processing, reconciliation, and reporting suites with GPS integration for real-time vehicle tracking in fleet management.
Medical & Health Platforms: Developed management systems with offline databases and backends for health apps, including Hijri calendar integrations.
Mentoring & Team Leadership: Cultivated learning-driven cultures by mentoring juniors, promoting best practices, and facilitating knowledge transfer through pair programming and documentation.

Education

Master of Innovation and Research in Informatics, Universitat Politècnica de Catalunya, Barcelona, Spain — **2026 – Present**
Bachelor of Software Engineering, Shahid Chamran University, Ahvaz, Iran — **2012 – 2016**

Languages

English: Full professional proficiency | Persian: Native
